

PPI Assessment Report

Karthik Kumar

Machine Learning Engineer

Sarkar Corp

07 August 2026

Overall Assessment

Moderately Matching

The conversation produced usable evidence for this candidate's overall suitability, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

AI Score

Skills match - Not Matching

Available evidence demonstrates dependable capability in Skills match, with relevant practical examples. Interview discussion should confirm depth, decision quality, independent ownership, and consistency across comparable work situations.

Experience relevance - Not Matching

Available evidence demonstrates dependable capability in Experience relevance, with relevant practical examples. Interview discussion should confirm depth, decision quality, independent ownership, and consistency across comparable work situations.

Role & responsibility alignment - Not Matching

Available evidence demonstrates dependable capability in Role & responsibility alignment, with relevant practical examples. Interview discussion should confirm depth, decision quality, independent ownership, and consistency across comparable work situations.

Education & qualification fit - Not Matching

Available evidence demonstrates dependable capability in Education & qualification fit, with relevant practical examples. Interview discussion should confirm depth, decision quality, independent ownership, and consistency across comparable work situations.

Primary Skills

Python - Matching Role requires: Highly Matching	The conversation produced usable evidence for Python, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.
PyTorch - Moderately Matching Role requires: Highly Matching	The conversation produced usable evidence for PyTorch, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.
TensorFlow - Not Matching Role requires: Highly Matching	The conversation produced usable evidence for TensorFlow, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.
ML - Not Matching Role requires: Highly Matching	The conversation produced usable evidence for ML, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.
Python (core) - Not Matching Role requires: Highly Matching	The conversation produced usable evidence for Python (core), with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Secondary Skills

Python (supporting) - Not Matching Role requires: Matching	The conversation produced usable evidence for Python (supporting), with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.
PyTorch (supporting) - Not Matching Role requires: Matching	The conversation produced usable evidence for PyTorch (supporting), with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

TensorFlow (supporting) -
Moderately Matching
Role requires: Matching

The conversation produced usable evidence for TensorFlow (supporting), with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

ML (supporting) - Moderately
Matching
Role requires: Matching

The conversation produced usable evidence for ML (supporting), with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Python (wider supporting) -
Matching
Role requires: Matching

The conversation produced usable evidence for Python (wider supporting), with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Behavioural Competencies

Ownership - Matching
Role requires: Matching

The conversation produced usable evidence for Ownership, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Communication - Moderately
Matching
Role requires: Matching

The conversation produced usable evidence for Communication, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Collaboration - Not Matching
Role requires: Matching

The conversation produced usable evidence for Collaboration, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Problem solving - Highly
Matching
Role requires: Matching

The conversation produced usable evidence for Problem solving, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Adaptability - Not Matching

Role requires: Matching

The conversation produced usable evidence for Adaptability, with examples showing how the candidate approaches this work in practice. The account is credible but not exhaustive, so an interviewer should press for a second situation, the reasoning behind the decision taken, and the outcome the candidate personally owned.

Suggested interview questions

1. Ask TensorFlow: describe one recent situation in detail, and what you personally decided.
2. Ask Collaboration: describe one recent situation in detail, and what you personally decided.
3. Ask ML: describe one recent situation in detail, and what you personally decided.
4. Ask PyTorch (supporting): describe one recent situation in detail, and what you personally decided.
5. Ask Python (supporting): describe one recent situation in detail, and what you personally decided.
6. Ask Adaptability: describe one recent situation in detail, and what you personally decided.
7. Ask Python (core): describe one recent situation in detail, and what you personally decided.
8. Ask Python: describe one recent situation in detail, and what you personally decided.
9. Ask Communication: describe one recent situation in detail, and what you personally decided.
10. Ask PyTorch: describe one recent situation in detail, and what you personally decided.
